## Instructions for jumping start a car

### Materials needed:

- A set of jumper cables
- Another vehicle (Ask your friend/neighbor or someone next to you)

**Step1:** Park two vehicles next to each other and shut down the engines for both cars.

**Step2:** Open the hood for both cars

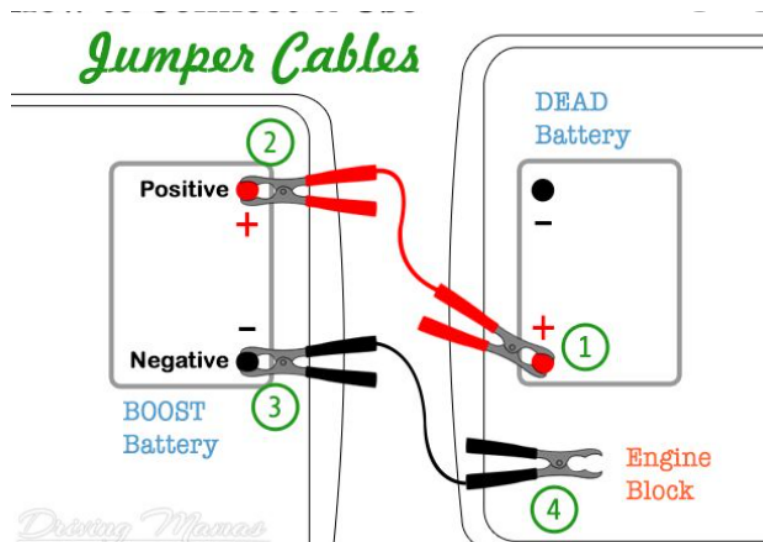

**Step3:** Find the battery location under the hood. The left picture is a battery model. The right picture is an example of a battery under the car hood. Notice there is a positive (+) terminal and a negative (-) terminal on a battery.

**Step4: Connect the jumper cables. Follow the steps below.**

1. Clamp the **red** cable to the dead battery **(+) terminal**
2. Clamp another side of the **red** cable to the good battery **(+) terminal**
3. Clamp the **black** cable to the good battery **(-) terminal**
4. Clamp another side of the **black** cable to a piece of bare metal (such as the engine block of the dead car)
5. Start the good vehicle and leave it for a few minutes while the dead battery charges.
6. Start the vehicle with the dead battery and leave it for a few minutes.
7. Remove the cables in reverse order ( 4->3->2->1)

**Note:** If the vehicle is unable to start at step 6, you should wait longer in step 5. You should also replace your battery if the battery keeps dying.
